Полностью дописали функцию для Comment.

```go
func CreateAnotherComment(c *fiber.Ctx) error {
    var data NewComment
    err := c.BodyParser(&data)
    if err != nil {
        log.Fatalf("Product error in post request #{err}")
    }
    var p []models.Product
    db.DB.Find(&p)

    comment := models.Comment{
        CashierId: data.CashierId,
        ProductId: data.ProductId,
        Content:   data.Content,
        CreatedAt: time.Time{},
        UpdatedAt: time.Time{},
    }
    db.DB.Create(&comment)

    //db.DB.Table("comments").Where("id = ?", comment.Id).Update("sku", "SK00"+str

    Response := map[string]interface{}{
        "success": true,
        "message": "Success",
        "data":    comment,
    }
    return (c.JSON(Response))
}
```

Model:

```go
type Comment struct {   6 usages
    Id        int      `json:"id" gorm:"primaryKey"`
    CashierId uint     `json:"cashierId"` //Cashier
    ProductId uint     `json:"productId"` //Product
    Content   string   `json:"content"`
    Cashier   Cashier  `json:"cashier"`
    CreatedAt time.Time `json:"createdAt"`
    UpdatedAt time.Time `json:"updated_at"`
}
```
